Completed on	Friday, 10 October 2025, 2:15 PM
Time taken	21 days
Marks	1.00/1.00
Grade	<b>10.00</b> out of 10.00 ( <b>100%</b> )

**Question 1** | Correct | Mark 1.00 out of 1.00**Problem Statement**

Given an array of 1s and 0s this has all 1s first followed by all 0s. Aim is to find the number of 0s. Write a program using Divide and Conquer to Count the number of zeroes in the given array.

Input Format

First Line Contains Integer m – Size of array

Next m lines Contains m numbers – Elements of an array

Output Format

First Line Contains Integer – Number of zeroes present in the given array.

**Answer:** (penalty regime: 0 %)

```

1 #include <stdio.h>
2
3 int findFirstZero(int arr[], int low, int high) {
4     if (high >= low) {
5         int mid = (low + high) / 2;
6         if (arr[mid] == 0 && (mid == 0 || arr[mid - 1] == 1)) {
7             return mid;
8         }
9         if (arr[mid] == 1) {
10            return findFirstZero(arr, mid + 1, high);
11        } else {
12            return findFirstZero(arr, low, mid - 1);
13        }
14    }
15    return -1;
16 }
17
18 int countZeros(int arr[], int n) {
19     int firstZeroIndex = findFirstZero(arr, 0, n - 1);
20     if (firstZeroIndex == -1) {
21         return 0;
22     }
23     return n - firstZeroIndex;
24 }
25
26 int main() {
27     int m;
28     scanf("%d", &m);
29
30     int arr[m];
31     for (int i = 0; i < m; i++) {
32         scanf("%d", &arr[i]);
33     }
34
35     int result = countZeros(arr, m);
36     printf("%d\n", result);
37
38     return 0;
39 }
40

```

State	Finished
Completed on	Friday, 10 October 2025, 2:15 PM
Time taken	4 days 16 hours
Marks	1.00/1.00
Grade	10.00 out of 10.00 (100%)

**Question 1** | Correct Mark 1.00 out of 1.00

Given an array `nums` of size `n`, return *the majority element*.

The majority element is the element that appears more than  $\lfloor n / 2 \rfloor$  times. You may assume that the majority element always exists in the array.

**Example 1:**

Input: `nums = [3,2,3]`

Output: 3

**Example 2:**

Input: `nums = [2,2,1,1,1,2,2]`

Output: 2

**Constraints:**

- `n == nums.length`
- `1 <= n <= 5 * 104`
- `-231 <= nums[i] <= 231 - 1`

**For example:**

Input	Result
3 3 2 3	3
7 2 2 1 1 1 2 2	2

**Answer:** (penalty regime: 0 %)

```

1  #include <stdio.h>
2
3  int majorityElement(int* nums, int numsSize) {
4      int candidate = 0;
5      int count = 0;
6
7      for (int i = 0; i < numsSize; i++) {
8          if (count == 0) {
9              candidate = nums[i];
10             count = 1;
11         } else if (nums[i] == candidate) {
12             count++;
13         } else {
14             count--;
15         }
16     }
17
18     return candidate;
19 }
20
21 int main() {
22     int n;
23     scanf("%d", &n);
24
25     int nums[n];
26     for (int i = 0; i < n; i++) {
27         scanf("%d", &nums[i]);
28     }
29
30     int result = majorityElement(nums, n);
31     printf("%d\n", result);
32
33     return 0;
34 }
```

**Question 1** | Correct | Mark 1.00 out of 1.00**Problem Statement:**

Given a sorted array of integers say arr[] and a number x. Write a recursive program using divide and conquer strategy to check if there exist two elements in the array whose sum = x. If there exist such two elements then return the numbers, otherwise print as "No".

Note: Write a Divide and Conquer Solution

**Input Format**

First Line Contains Integer n – Size of array

Next n lines Contains n numbers – Elements of an array

Last Line Contains Integer x – Sum Value

**Output Format**

First Line Contains Integer – Element1

Second Line Contains Integer – Element2 (Element 1 and Elements 2 together sums to value "x")

**Answer:** (penalty regime: 0 %)

```

1  #include <stdio.h>
2
3  void findPair(int arr[], int left, int right, int x) {
4      if (left >= right) {
5          printf("No\n");
6          return;
7      }
8
9      int sum = arr[left] + arr[right];
10     if (sum == x) {
11         printf("%d\n%d\n", arr[left], arr[right]);
12     } else if (sum < x) {
13         findPair(arr, left + 1, right, x);
14     } else {
15         findPair(arr, left, right - 1, x);

**Question 1** | Correct Mark 1.00 out of 1.00

Write a Program to Implement the Quick Sort Algorithm

Input Format:

The first line contains the no of elements in the list-n

The next n lines contain the elements.

Output:

Sorted list of elements

For example:

Input	Result
5 67 34 12 98 78	12 34 67 78 98

Answer:

```

1  #include <stdio.h>
2
3  void swap(int *a, int *b) {
4      int temp = *a;
5      *a = *b;
6      *b = temp;
7  }
8
9  int partition(int arr[], int low, int high) {
